Accelerating Climate Solutions:

Technology & Policy Options for Reducing Energy Use & GHG Emissions

Side-Event during UNFCCC COP-19
The National Stadium | Warsaw
Thursday, November 14, 2013
16:45-18:15 | Room 2

Organized by
Accelerating Climate Solutions:

Technology & Policy Options for Reducing Energy Use & GHG Emissions

Climate change is arguably one of the key global policy concerns of the 21st century. Governments and stakeholders around the world agree that action needs to be taken to mitigate climate change, particularly through reducing GHG emissions over the coming decades. ICCA and CEFIC have assembled a panel of experts from the chemicals industry, the International Energy Agency (IEA) and the UN Environment Programme to offer their views on policy challenges and opportunities for accelerating climate solutions, and the important role of innovation and technologies in protecting the environment.

Moderator
Krzysztof Łokaj, Senior Manager, Polish Chamber of Chemical Industry

Panelists
Jean Francois Gagne, Head of Energy Technology Policy Division, International Energy Agency

Stéphane Pouffary, Founder, CEO and Honorary President, ENERGIES 2050 & Advisory Board Chair of the UN Environment Programme Sustainable Buildings and Climate Initiative

Russel Mills, Global Director of Energy & Climate Change Policy, Dow Chemical and ICCA Vice Chair of the Energy and Climate Change Leadership Group
